

SNAP User Forum - 2019 / Executive Summary

SNAP Team

13/09/2019

ESA UNCLASSIFIED - For Official Use

SNAP is recognised as an important tool and the User Community is grateful to ESA for making it available as free and open source software.

The User Community welcomes ESA's continued support of SNAP and endorses it.

The main recommendations are:

- The SNAP Integration with Python should be improved;
- The SNAP Performance and Memory Usage problems should be addressed;
- The SNAP feature list is impressive and welcome, going forward feature consolidation and improvement is as important as adding new feature;
- The SNAP development process should be more transparent and open, or at least communicated more effectively;
- The STEP Forum is an important tool that unites the user and developer community, the STEP portal itself should be improved to also include SNAP related materials from different sources (e.g. RUS).

The User Community welcomes the repetition of the event in a similar setup.
