Sen2Cor 2.11

What is Sen2Cor?

Sen2Cor is a **processor** for Sentinel-2 **Level 2A** product generation and formatting; it performs the atmospheric-, terrain- and cirrus correction of mono-temporal Top-Of-Atmosphere Level 1C input data. Sen2Cor creates Surface Reflectance (optionally terrain- and cirrus- corrected) images and, additionally, Aerosol Optical Thickness Map, Water Vapour Map, Scene Classification Map and Quality Indicators for cloud and snow probabilities. Its output product format is inherited from the Level 1C User Product: JPEG 2000 images, with three different resolutions, 60, 20 and 10 m.

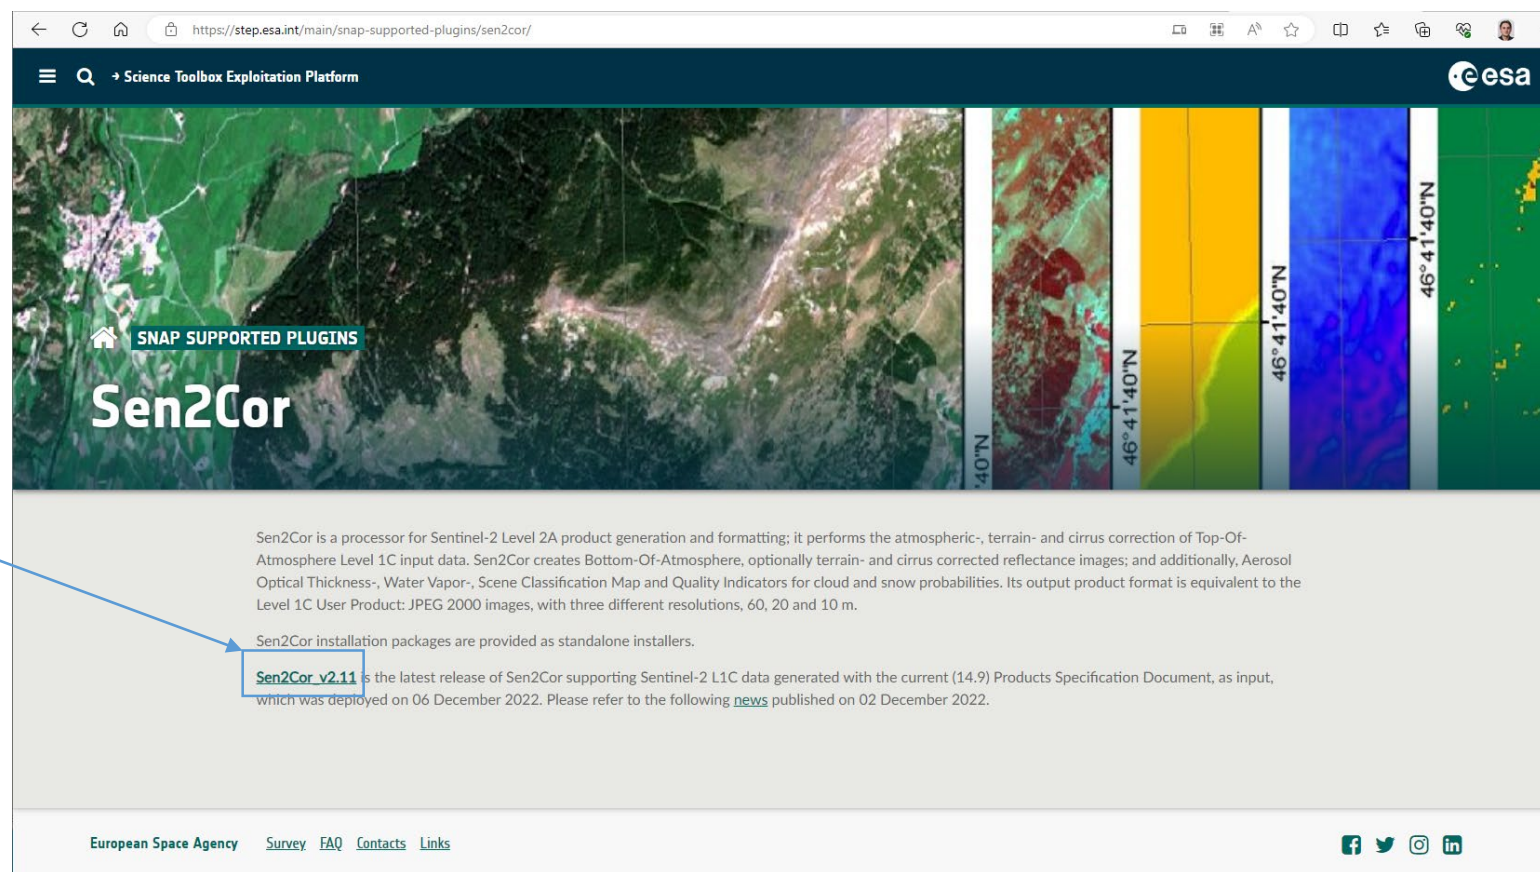

Sen2Cor 2.11

Download

Sen2Cor can be downloaded from [Sen2Cor – STEP \(esa.int\)](https://step.esa.int/main/snap-supported-plugins/sen2cor/) page where the latest version is available

Link to the Sen2Cor Download Page

Sen2Cor 2.11

Download

The [Sen2Cor v2.11 – Download Page](#) contains a series of important information

- Information on new features within the latest release
- Link to necessary auxiliary files to be downloaded for a full configuration
 - DEM, ESA-CCI (see aux-files)
- Expected differences between L2A Core Product* and Sen2Cor Toolbox L2A Product:

Using the Copernicus DEM@90m, the only differences between L2A "Toolbox" and L2A "Core" Products are reported in the following table:

Category of Difference	Difference	L2A Toolbox	L2A Core Products
Product Format	HTML Folder	No	Yes
	Manifest	Same Set of Items but arranged in different order	
	Product Quality Metadata	Copied from L1C	Generated by L2A On-line Quality Check (OLQC)
	JPEG2000 encoding library	OpenJPEG	Kakadu
	Processing baseline	99.99	Official, e.g. 05.09

- Installers:
 - Windows ([link](#))
 - Linux ([link](#))
- Documentation ([see next page](#))

*Processed by the ESA Copernicus Sentinel-2 Productions Services and then disseminated via the official channels (see Slide [15](#))

Sen2Cor 2.11

Documentation

The [Sen2Cor v2.11 – Download Page](#) contains a series of important information

- Documentation:
 - Software Release Notes: [SRN](#)
 - Software User Manual: [SUM](#)
 - Copernicus Sentinel-2 Product Definition Document: [PDD](#)
 - Copernicus Sentinel-2 Level 2A Input Output Data Definition: [IODD](#)
 - Copernicus Sentinel-2 Level 2A Algorithm Theoretical Baseline Document: [ATBD](#)

Sen2Cor 2.11

Installation (See also [SUM](#), Section 3.1 and [SRN](#) Section 4)

The Python runtime packages of Sen2Cor will work fully autonomously and isolated and do not need any further installation of Anaconda, GDAL, OpenJPEG or any other python packages.

Example_1: **Windows (64 bit is mandatory).**

Package: **Sen2Cor-02.11.00-win64.zip**

- Extract the zipped archive with an unzip tool (in any desired location, best with short path)
- This will create a folder named: Sen2Cor-02.11.00-win64
- Change into the directory Sen2Cor-02.11.00-win64 using the windows command line interpreter
- Call the command “L2A_Process.bat --help”

```
C:\Users\TEST\test_sen2Cor\Sen2Cor-02.11.00-win64\L2A_Process.bat --help
```

Sen2Cor 2.11

Installation (See also [SUM](#), Section 3.1 and [SRN](#) Section 4)

This will produce the following lines in case of first installation...

```
C:\Users\TEST\test_sen2Cor\Sen2Cor-02.11.00-win64\Lib\site-packages\sen2cor\cfg\L2A_GIPP.xml  
-> C:\Users\TEST\Documents\sen2cor\2.11\cfg\L2A_GIPP.xml  
1 File(s) copied
```

i.e. It will create a directory `\sen2cor\2.11\cfg` in the “Documents” folder, where the installer will place the default `L2A_GIPP.xml`

N.B. In case of re-installation, the `L2A_GIPP.xml` will not be overwritten if present. A message similar to the following will be displayed:

```
File 'C:\Users\TEST\test_sen2Cor\Sen2Cor-02.11.00-win64\Lib\site-packages\sen2cor\cfg\L2A_GIPP.xml' already exists. So we don't change it! Please make sure its structure is in line with version installed
```

Please be sure to have the correct and more recent `L2A_GIPP.xml` within this folder.

Sen2Cor 2.11

Installation (See also [SUM](#), Section 3.1 and [SRN](#) Section 4)

...followed by:

```
usage: L2A_Process.py [-h] [--mode MODE] [--resolution {10,20,60}]
                    [--datastrip DATASTRIP] [--tile TILE]
                    [--output_dir OUTPUT_DIR] [--work_dir WORK_DIR]
                    [--img_database_dir IMG_DATABASE_DIR]
                    [--res_database_dir RES_DATABASE_DIR]
                    [--processing_centre PROCESSING_CENTRE]
                    [--archiving_centre ARCHIVING_CENTRE]
                    [--processing_baseline PROCESSING_BASELINE] [--raw]
                    [--tif] [--sc_only] [--sc_classic] [--sc_cog]
                    [--cr_only] [--debug] [--GIP_L2A GIP_L2A]
                    [--GIP_L2A_SC GIP_L2A_SC] [--GIP_L2A_AC GIP_L2A_AC]
                    [--GIP_L2A_PB GIP_L2A_PB]
                    input_dir
```

Sen2Cor. Version: 02.11.00, created: 2022.10.20, supporting Level-1C product version 14.2 - 14.9.

positional arguments:

input_dir Directory of Level-1C input

optional arguments:

-h, --help show this help message and exit
 --mode MODE Mode: generate_datastrip, process_tile
 --resolution {10,20,60}
 Target resolution, can be 10, 20 or 60m. If omitted,
 only 20 and 10m resolutions will be processed
 --datastrip DATASTRIP
 Datastrip folder
 --tile TILE Tile folder
 --output_dir OUTPUT_DIR
 Output directory

```
--work_dir WORK_DIR Work directory
--img_database_dir IMG_DATABASE_DIR
      Database directory for L1C input images
--res_database_dir RES_DATABASE_DIR
      Database directory for results and temporary products
--processing_centre PROCESSING_CENTRE
      Processing centre as regex: ^[A-Z]{4}$, e.g "SGS_"
--archiving_centre ARCHIVING_CENTRE
      Archiving centre as regex: ^[A-Z]{4}$, e.g. "SGS_"
--processing_baseline PROCESSING_BASELINE
      Processing baseline in the format: "dd.dd", where
      d=[0:9]
--raw Export raw images in rawl format with ENVI hdr
--tif Export raw images in TIFF format instead of JPEG-2000
--sc_only Performs only the scene classification at 60 or 20m
      resolution
--sc_classic Performs scene classification in Sen2Cor 2.9 mode
--sc_cog Export SCL image in COG format instead of JPEG_2000
--cr_only Performs only the creation of the L2A product tree, no
      processing
--debug Performs in debug mode
--GIP_L2A GIP_L2A Select the user GIPP
--GIP_L2A_SC GIP_L2A_SC
      Select the scene classification GIPP
--GIP_L2A_AC GIP_L2A_AC
      Select the atmospheric correction GIPP
--GIP_L2A_PB GIP_L2A_PB
      Select the processing baseline GIPP
```

C:\Users\TEST\test_sen2Cor\Sen2Cor-02.11.00-win64>

This output indicates a correct installation.

Sen2Cor 2.11

Installation (See also [SUM](#), Section 3.1 and [SRN](#) Section 4)

The Python runtime packages of Sen2Cor will work fully autonomously and isolated and do not need any further installation of Anaconda, GDAL, OpenJPEG or any other python packages.

Example_2: **Linux (64 bit is mandatory).**

Package: **Sen2Cor-02.11.00-Linux64.run**

- Run in terminal: `sh Sen2Cor-02.11.00-Linux64.run`
- This will create a folder named: `Sen2Cor-02.11.00-Linux64`
- Change into the directory `Sen2Cor-02.11.00-Linux64`
- You can call the L2A Processor with the following:

```
C:/Users/TEST/test_sen2Cor/Sen2Cor-02.11.00-Linux64/bin/L2A_Process --help
```

- From here, in case of correct installation, the output will be similar to the Windows' output shown in the previous slides.

Sen2Cor 2.11

Configuration: L2A_GIPP.xml

Calibration for Expert Users: L2A_CAL_SC_GIPP.xml and L2A_CAL_AC_GIPP.xml

The L2A_GIPP.xml file is the main configuration file for Sen2Cor.

Note: We recommend not to change the main parameters within the following sections:

- 1) `<PSD_Version>DEFAULT</PSD_Version>`
- 2) `<Scene_Classification>...</Scene_Classification>`
- 3) `<Atmospheric_Correction>...</Atmospheric_Correction>`

as the default configuration represents the configuration of the L2A Core Product.

The L2A_CAL_SC_GIPP.xml file is the calibration file for the Sen2Cor Scene Classification.

Note: We recommend **not** to modify the main parameters within the file as the default configuration represents the configuration of the L2A Core Product.

The L2A_CAL_AC_GIPP.xml file is the expert calibration file for the Sen2Cor Atmospheric Correction.

Note: We recommend **not** to modify the main parameters within the file as the default configuration represents the configuration of the L2A Core Product.

Sen2Cor 2.11

Configuration: Digital Elevation Model, DEM (See also [SUM](#), Section 2.2.8)

The usage of a DEM is not set by default. It has to be set manually.

The user can specify a DEM in the L2A_GIPP.xml configuration file by setting the parameter for `<DEM_Directory>` to a relative path inside the configuration directory, instead of NONE.

The DEM shall be located in the specified folder in the Sen2Cor home directory.

Example: `<DEM_Directory>dem/dem_type</DEM_Directory>`

If no appropriate DEM is found in this folder, the processor will try to retrieve DEM files from the selected address. The processor will start automatically to download the DEM files from the database that has to be referenced by e.g.:

```
<DEM_Reference>
http://website.dem./dem-folder/dem\_files
</DEM_Reference>
```

Sen2Cor 2.11

Configuration: Digital Elevation Model, DEM (See also [SUM](#), Section 2.2.8)

Sen2Cor Toolbox currently supports the following DEMs:

- **Copernicus DEM (Recommended)** :
 - Information on the Copernicus DEM can be found at this link:
 - [Copernicus Digital Elevation Model - Copernicus Contributing Missions Online](#)
 - Example of links to be set in the `L2A_GIPP.xml` `<DEM_Reference>`:
 - Copernicus DEM at 30m resolution:
 - `https://prism-dem-open.copernicus.eu/pd-desk-open-access/prismDownload/COP-DEM_GLO-30-DGED__2023_1/`
 - Copernicus DEM at 90m resolution:
 - `https://prism-dem-open.copernicus.eu/pd-desk-open-access/prismDownload/COP-DEM_GLO-90-DGED__2023_1/`
- **SRTM (Legacy)** :
 - Information on the SRTM can be found at this link:
 - [SRTM | Earthdata \(nasa.gov\)](#)
 - Example of link to be set in the `L2A_GIPP.xml` `<DEM_Reference>`:
 - `http://srtm.csi.cgiar.org/wp-content/uploads/files/srtm_5x5/TIFF/`

If the download fails and no local DEM are found, the processor will continue **with a flat terrain calculation**.

If the necessary DEM file is found in the local folder defined by `<DEM_Directory>`, the download will not take place and the local archive will be used instead.

In order to use the SRTM, the DEM reference has always to be set, even if the DEM are already available.

Sen2Cor 2.11

Configuration: [ESA Climate Change Initiative](#), ESA CCI, Auxiliary Files (See also [SUM](#), Section 3.1.2)

The *ESA CCI-LC* for Sen2Cor data package is prepared for users of Sen2Cor version ≥ 2.5 who want to benefit from the last improvements of Sen2Cor Cloud Screening and Classification module. This auxiliary data information is used in Sen2Cor to improve the accuracy of Sen2Cor classification over water, urban and bare areas and also to have a better handling of false detection of snow pixels.

N.B. a *Digital Elevation Model (DEM)* is a pre-requisite for using *ESACCI_LC* information in the Scene Classification algorithm.

Users of Sen2Cor version 2.10 (and up)

Download the new monthly snow condition files derived from ESACCI from this location:

<https://earth.esa.int/eogateway/ftp/Sentinel-2/ESACCI-LC-L4-ALL-FOR-SEN2COR-2.10.tar.gz>

The downloaded file shall then be extracted at this location of Sen2Cor installation: `$SEN2COR_BIN/aux_data/`

Sen2Cor 2.11

Configuration: Use of L1C Quality Masks (See also [SUM](#), Section 2.2.8, [IODD](#) Section 2.4)

Since version 2.10, Sen2Cor supports and handles L1C quality masks in raster format describing invalid pixels in the L1C input data. The L2A_GIPP.xml configuration file contains a new parameter:

```
<Handle_L1C_QLT_Mask>TRUE</Handle_L1C_QLT_Mask>
<!-- FALSE: no handling of L1C Quality Mask, TRUE: handling L1C Quality Mask -->
```

When this is set True, Sen2Cor reads from the file GENERAL_QUALITY.xml from the folder L1C_product/GRANULE/tile_id/QI_DATA/ if loss of data is reported.

In the affirmative case, it reads the list of the affected bands.

Sen2Cor then checks within the:

L1C_product/GRANULE/tile_id/QI_DATA/ that contains MSK_QUALIT_BXX.jp2 (where XX is the ID of the bands) files.

The files with the affected bands are read and a mask is created.

L2A TCI image of a tile processed with a Quality Mask masking the defective pixels of different affected bands. 15

Sen2Cor 2.11

Data access to Sen2Cor input data: Copernicus Sentinel-2 Level-1C Products

Sentinel-2 L1C Products can be retrieved either from:

- Copernicus Data Space Ecosystem*
[Copernicus Data Space Ecosystem | Europe's eyes on Earth](#)
- Copernicus Data and Information Access Services (DIAS)*
[Data and Information Access Services | Copernicus](#)
 e.g.: <https://creodias.eu>, <https://www.wekeo.eu/>

[Copernicus Browser](#)

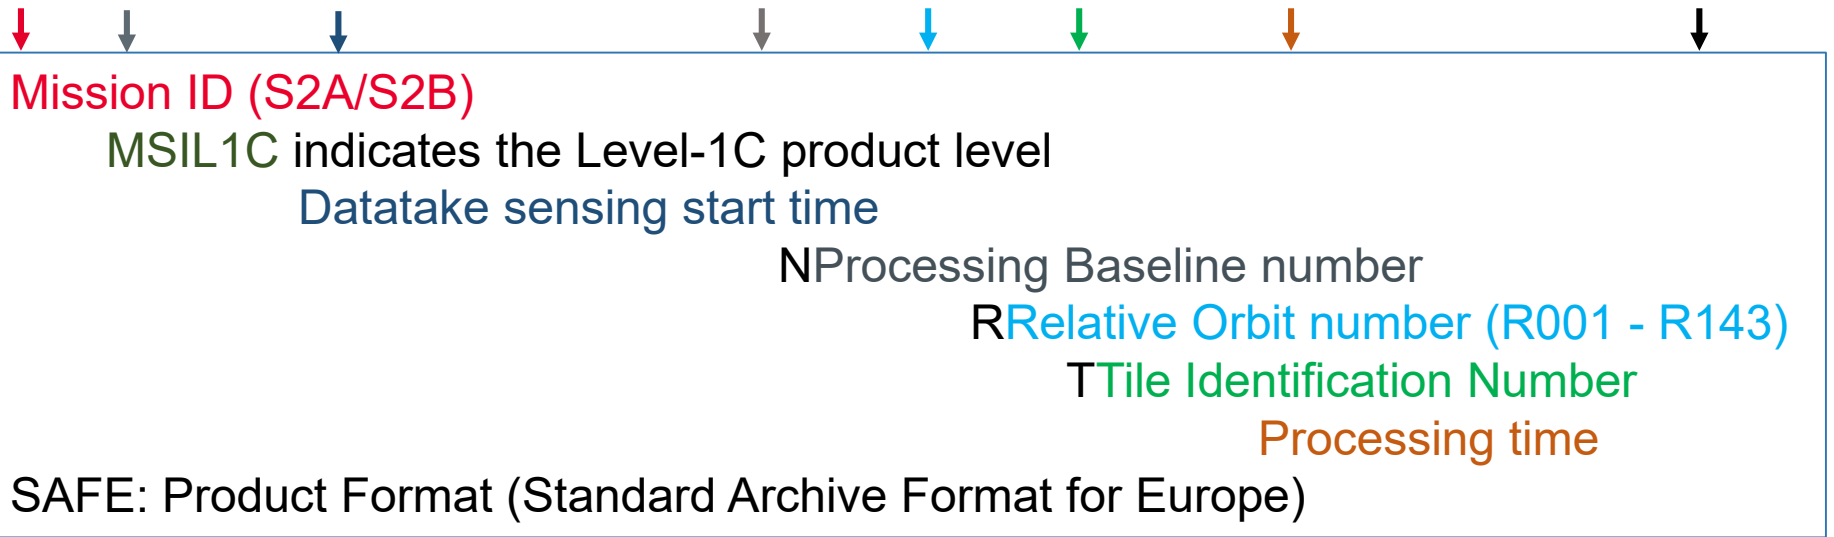

*N.B. Login may be required to access the data

Please note that the easiest way to get Level-2A files is to download them from the above data access services. You only need to run Sen2Cor to get Level-2A files if you need to test a special configuration (e.g. no terrain correction)

Sen2Cor 2.11

Processing: A quick guide to the Level-1C Products

S2B_MSIL1C_20231022T095949_N0509_R122_T32TQM_20231022T120200.SAFE

The **Level-1C** product is composed of 110x110 km² tiles (ortho-images in [UTM/WGS84](#) projection). Earth is subdivided on a predefined set of tiles, defined in UTM/WGS84 projection and using a 100 km step. However, each tile has a surface of 110x110 km² in order to provide large overlap with the neighbouring.

The Sentinel 2 Tile system is described in detail at this link: [Sentinel-2 UTM Tiling Grid](#)

A KML file is also available at this link: [Sentinel-2-KML-Tile_System](#)

For general description of Copernicus Sentinel-2 Products: [Products Overview](#)

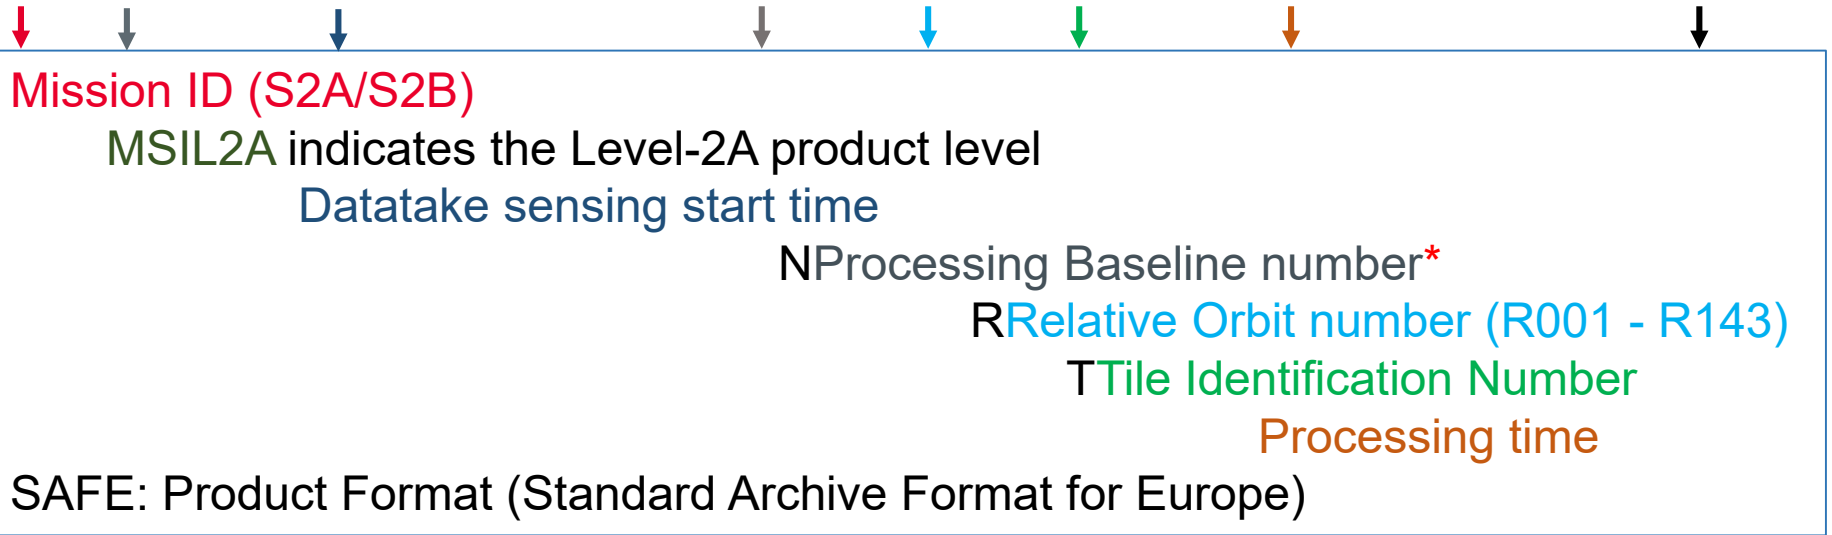

For detailed description of Copernicus Sentinel-2 L1C Products: [L1C General Description](#) & [L1C Algorithms and Products](#)

Sen2Cor 2.11

Processing: A quick guide to the Level-2A Products

S2B_MSIL2A_20231022T095949_N0509_R122_T32TQM_20231022T130531.SAFE

The **Level-2A** product provides atmospherically corrected Surface Reflectance (SR**) images, derived from the associated Level-1C products.

Detailed description on Copernicus Sentinel-2 L2A Core Products can be found at these links: [L2A General Description](#), [L2A Algorithms and Products](#), and in the Sen2Cor [Documentations](#)

*L2A Products processed with `Sen2Cor Toolbox` will have by default a processing baseline number **N9999** to distinguish them from operational products generated by the ground segment.

**SR corresponds to HDRF (Hemispherical Directional Reflectance Factor)
